To: The Commission

STATUS REPORT
CTC TELECOM, INC.

CTC Telecom, Inc., by its attorney, (Reporter), pursuant to the Commission's March 15, 2006, *Order*, FCC 06-32, ¶ 20, hereby submits a status report regarding the 95% location capable handset penetration requirement. In support whereof, the following is respectfully submitted:

(1) The number and status of Phase II requests from PSAPs (including those requests it may consider invalid): Reporter has not received any requests for Phase II location service from any entity.

(2) The dates on which Phase II service has been implemented or will be available to PSAPs served by its network: As of March 2006 Reporter's switch became capable of handling Phase II location service.

(3) The status of CTC's coordination efforts with PSAPs for alternative 95% handset penetration dates: The PSAPs in the rural area served by Reporter are severely limited by budgetary constraints and they are unable even to consider installing the necessary

infrastructure needed to process Phase II service information. At this time the PSAPs do not have an interest in Reporter's effort to reach the 95% subscriber penetration level.

(4) CTC's efforts to encourage customers to upgrade to location capable handsets: Reporter provides service to approximately 370 subscribers in a very sparsely populated area. Beginning with the May-June 2006 billing cycle Reporter began including bill inserts highlighting the benefits of a location capable handset to try to encourage people to upgrade handsets. Reporter also includes such information in the newspaper advertizing it runs from time to time. Unlike larger carriers, however, Reporter is unable to offer free service or discounts to try to upgrade subscriber accounts. With only 370 subscribers every customer is important and such programs are simply not possible.

(5) The percentage of CTC's customers with location-capable phones: As first reported in the January 31, 2007, *Status Report*, Reporter's penetration level is now 95%+ and Reporter is in compliance with the 95% location capable handset penetration requirement. Reporter, therefore, remains in compliance with the 95% standard.

(6) Detailed discussion about the efforts made to achieve compliance and whether CTC is on schedule to meet the March 15, 2007, extended 95% penetration deadline: Reporter was hopeful that it will achieve the 95% subscriber penetration level by the March 15, 2007 deadline. Reporter's billing insert and advertizing plans and in store/office consultations with subscribers were effective and caused a sufficient number of subscribers to convert to location capable handsets.

Respectfully submitted,
CTC TELECOM, INC.
